Abstracts

According to our (Global Info Research) latest study, the global Isobornyl Acetate market size was valued at US\$ 69.4 million in 2023 and is forecast to a readjusted size of USD 95.1 million by 2030 with a CAGR of 4.1% during review period.

Isoborneol acetate is a clear liquid with a woody, camphor-like aroma. It is prepared from camphene and acetic acid under the catalysis of sulfuric acid; it can also be prepared using ion exchange resin or activated clay as a catalyst.

Isoborneol acetate is a bulk fragrance, widely used in daily chemical flavor formulas, such as soap flavors, synthetic detergent flavors, and other daily chemical products. The conventional dosage is within 30%. Currently, the FDA and the European Council have also temporarily designated isoborneol acetate as a list of artificial edible flavors that are allowed to be used in food without harming human health.

As an intermediate product of synthetic camphor and a widely used basic fragrance, isoborneol acetate is mainly used as a flavoring agent in the flavor and fragrance industry. It is widely used in the production of soap flavors, synthetic detergent flavors and other daily chemical products, such as perfume, soap, talcum powder, toilet water, air spray and other products. Because isoborneol acetate has a refreshing and fresh pine leaf aroma, its use in forest-scented indoor fragrances, herbal soaps, fresh herbal shampoos and other products is also increasing.

The global market demand for isoborneol acetate continues to grow, especially in the context of strong demand for flavors and fragrances in the daily chemical industry, the market demand for isoborneol acetate has maintained rapid growth. Isoborneol acetate has a similar smell to natural essential oils (such as pine needles) and borneol acetate, but is cheaper, so it has greater market competitiveness.
