Abstracts

According to our (Global Info Research) latest study, the global Isopropyl Cyanoacrylate market size was valued at US\$ 744 million in 2025 and is forecast to a readjusted size of US\$ 1139 million by 2032 with a CAGR of 6.3% during review period.

Isopropyl Cyanoacrylate is an alkyl α -cyanoacrylate monomer used as a key reactive raw material for instant-curing cyanoacrylate adhesive systems, polymerizing rapidly in the presence of trace moisture and enabling fast bonding and sealing in industrial and selected medical manufacturing contexts. In 2025, the average global transaction price (blended across industrial and high-purity grades) is approximately US\$85 per kg, with global sales volume around 8,500 metric tons and production volume about 9,100 metric tons; the industry typically maintains a gross margin of 28%–42%, driven by monomer synthesis and purification complexity, stabilization/inhibitor control, moisture-proof packaging requirements, compliance and QA costs, and value captured through downstream formulation integration. The supply chain includes upstream cyanoacetate intermediates, isopropyl-related feedstocks, formaldehyde-related inputs, catalysts, inhibitors/stabilizers, and packaging; midstream manufacturers perform monomer synthesis, distillation/purification, inhibitor dosing, moisture-controlled filling, testing, and batch traceability; downstream users include cyanoacrylate adhesive formulators, electronics and precision assembly manufacturers, medical device assemblers, automotive/industrial MRO users, and OEM integrators.

According to industry analysis, the competitive focus for isopropyl cyanoacrylate is shifting from basic monomer supply toward “application-ready” stability control and formulation compatibility, as end users demand lower blooming/odor, tighter viscosity windows, and more consistent cure performance across varying humidity and substrate

conditions; suppliers that can couple high-purity monomer production with downstream formulation and packaging know-how are better positioned for margin retention.
