IVF liquid consumables are essential fluids used throughout the in vitro fertilization (IVF) process to support the handling, culture, and preservation of gametes and embryos. These consumables include media for oocyte retrieval, sperm preparation, fertilization, embryo culture, and cryopreservation. They provide the necessary nutrients, pH balance, and osmolarity to create an optimal environment for gametes and embryos at each stage of the IVF cycle. Specific types include follicular fluid, sperm wash media, fertilization media, cleavage media, blastocyst media, and vitrification solutions. High-quality IVF liquid consumables are crucial for maintaining the viability and development of embryos, thus directly impacting the success rates of IVF treatments.
