## Abstracts

According to our (Global Info Research) latest study, the global Jacquard Circular Machine market size was valued at US\$ 549 million in 2024 and is forecast to a readjusted size of USD 777 million by 2031 with a CAGR of 4.8% during review period.

The jacquard circular knitting machine is controlled by the needle selection mechanism to place the knitting needles in different positions such as knitting, non-knitting and tucking to form different pattern structures. There are three types of needle selection mechanisms: mechanical, electronic and jet. Mechanical needle selection mechanisms are the most widely used, mainly vertical drum type, round tooth plate type, pattern plate drum type and jacquard wheel type. Jacquard machines are generally divided into two categories: single-sided series and double-sided series. Large single-sided jacquard knitting circular machines are commonly known as computer jacquard circular machines. Computer jacquard knitting circular machines greatly shorten the product design cycle, reduce the cost of circular machine products, greatly improve product quality, improve the economic and social benefits of enterprises, and at the same time improve the competitiveness and adaptability of enterprises.
