Abstracts

According to our (Global Info Research) latest study, the global Kerosene Emulsifier market size was valued at US\$ 276 million in 2025 and is forecast to a readjusted size of US\$ 369 million by 2032 with a CAGR of 4.2% during review period.

In 2025, the global production of kerosene emulsifiers was approximately 126,000 tons, with an average selling price of around US\$2,130 per ton. Single-line production capacity is approximately 4,000-7,000 tons per year, with an average gross profit margin of 15-25%. Kerosene emulsifiers are a type of emulsifier specifically used for liquids such as kerosene and water, facilitating the formation of stable emulsions between kerosene and water. Their main function is to reduce the surface tension between liquids, helping water and kerosene form a uniform and stable water-kerosene emulsion under certain conditions. They are widely used in the petroleum industry, aerospace, and certain fuel systems, playing a crucial role in optimizing combustion performance, improving energy efficiency, reducing emissions, and in specific fuel applications.

The upstream raw materials for kerosene emulsifiers mainly include petrochemical derivatives such as ethylene oxide, propylene oxide, fatty alcohols, alkylphenols, fatty acids, and styrene, which are the basic raw materials for synthesizing non-ionic and anionic surfactants. The downstream industry chain is mainly concentrated in the petroleum, aerospace, military, chemical, and energy sectors. Kerosene emulsifiers are widely used in the manufacture of water-kerosene emulsion fuels to improve combustion efficiency and stability, particularly in petroleum refining, rocket fuels, jet fuels, and some industrial combustion systems. They also play a key role in environmental protection and low-emission technologies.
