According to our (Global Info Research) latest study, the global KRAS Inhibitor market size was valued at US\$ 138 million in 2024 and is forecast to a readjusted size of USD 237 million by 2031 with a CAGR of 8.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

KRAS inhibitors are a class of targeted cancer therapies designed to block the activity of the KRAS protein, a common driver of cancer, particularly in pancreatic, colorectal, and lung cancers. KRAS mutations are notoriously difficult to target because the protein has a smooth surface with few pockets for drug binding. However, recent advances have led to the development of specific inhibitors, such as sotorasib and adagrasib, which target the G12C mutation in KRAS, a mutation present in a subset of cancers. These inhibitors work by irreversibly binding to the mutant KRAS protein, preventing it from signaling the uncontrolled cell growth that leads to cancer. While these drugs have shown promise, they are not universally effective, and resistance often develops, leading to ongoing research to improve their efficacy and expand their use to other KRAS mutations.
