An LAA (Left Atrial Appendage) occluder system is a medical device designed to close off the left atrial appendage, a small pouch in the upper chamber of the heart where blood clots can form. This device is typically used to reduce the risk of stroke in patients with atrial fibrillation (AFib) who cannot tolerate long-term anticoagulant therapy. The occluder is implanted through a minimally invasive procedure, sealing the appendage and preventing clots from entering the bloodstream.
