According to our (Global Info Research) latest study, the global Laboratory Vacuum Extruder market size was valued at US\$ 412 million in 2025 and is forecast to a readjusted size of US\$ 573 million by 2032 with a CAGR of 4.9% during review period.

A laboratory vacuum extruder is a small-scale extrusion device used in a laboratory environment. Its core function is to mix, degas, and shape materials (such as ceramic clay, polymer composites, and food ingredients) under vacuum conditions. By removing air bubbles and volatile components from the material through a vacuum system, the uniformity, density, and performance of the extruded preform can be significantly improved. The demand primarily stems from the high-standard verification requirements of the material research and development and process innovation stages. At the R&D end, universities, research institutions, and corporate R&D centers need to accurately simulate industrial extrusion processes in the pilot-scale stage, while simultaneously removing air bubbles and optimizing formulations and process parameters to ensure the uniformity and structural integrity of the material. This constitutes the core source of demand. Its upstream supply chain mainly includes precision machining (such as screw, barrel, and mold manufacturing), vacuum system components (vacuum pumps, seals), measurement and control systems (temperature control, pressure sensing), and suppliers of special corrosion-resistant and wear-resistant materials. Downstream, it directly serves laboratories and pilot production lines in fields such as new material R&D, special ceramics, polymer composites, battery electrodes, and food engineering, and provides key experimental data and sample support for the design and process scale-up of large-scale industrial extrusion equipment. In 2025, the production of laboratory vacuum extruders will be approximately 8,000 units, with an average selling price of approximately US\$50,000 per unit, a gross profit margin of approximately 35%,

and a single-line capacity of approximately 200 units per year.
