Laminated wheels is a kind of industrial tire suitable for vehicles running at low speed and high load. In addition to the characteristics of alarm wheels, it also has small starting torque, simple structure, convenient use and maintenance, small maintenance workload, no need to alarm, and no leakage. Risks of tire inflation and puncture. Laminated wheels are better in safety, wear resistance, puncture resistance, tear resistance, and economy.

Solid tires are industrial tires suitable for vehicles running at low speeds and high loads. In addition to the characteristics of pneumatic tires, they also have low starting resistance, simple structure, easy use and maintenance, small maintenance workload, no need for inflation, and no hidden dangers of air leakage and tire blowout. Therefore, solid tires have good safety, durability, puncture resistance, tear resistance, and economy. Solid tires are ideal for various applications due to their durability, cost-effectiveness, and wide adaptability. Whether in terms of safety, performance or economic benefits, solid tires have shown incomparable advantages. Among them, solid tires are mainly used for industrial purposes. With the development of Industry 4.0 and intelligent manufacturing, the technology of industrial solid tires is also constantly improving. In the future, more innovative materials and manufacturing processes will be used in tire design to further improve their performance and environmental protection. When choosing tires, companies need to consider not only current needs, but also future development trends.
