Abstracts

According to our latest research, the global Large-Scale Carbon Capture market size will reach USD 2293 million in 2031, growing at a CAGR of 10.3% over the analysis period.

The past few years have seen increased global attention and investment in carbon capture technology as a way to capture the emissions causing climate change before they enter the atmosphere. This technology has been further amplified by recent U.S.

Carbon Dioxide, CO₂, is commonly found in natural gas. In order to meet pipeline specifications or other application specific requirements, CO₂ separation is necessary. In addition, there may also be H₂S and H₂O present that needs to be removed. CO₂ separation membranes have been widely used for CO₂ removal applications and come with the added benefit of removing H₂S and H₂O as well.
