Laser Mask Writer is used for photomask manufacturing, it is a maskless lithography systems using laser source. Compared with Mask writers based on electron-beam (e-beam) technology, mask makers prefer to use faster laser-based systems wherever possible, including for all but the most critical masks for advanced devices. Laser writers are also widely used to overlay second level patterns on already-patterned masks, a requirement to produce phase-shifting masks (PSMs) that enhance the process window for wafer lithography.

On the basis of product type, more than 900mm²/min segment represent the largest share of the worldwide Laser Mask Writer market, with 51% share. In the applications, IC segment is estimated to be the largest end-use industry segment of the market, with 72% share of global market. Asia-Pacific holds the major share in the market, with a share of 44%.
