Abstracts

According to our (Global Info Research) latest study, the global Laser Paper Cutting Machine market size was valued at US\$ 1082 million in 2023 and is forecast to a readjusted size of USD 1401 million by 2030 with a CAGR of 2.5% during review period.

Laser paper cutter is a high-tech office equipment that uses laser technology to achieve fast and precise cutting of paper. It is usually composed of a laser generator, a mechanical transmission system, a control system and protective devices. The laser generator generates a high-energy laser beam, which is focused on the paper to be cut through an optical system. When the laser beam irradiates the surface of the paper, a high-power beam is generated, which melts and vaporizes the paper instantly, and finally achieves cutting. During the cutting process, the mechanical transmission system will accurately move the paper so that the laser beam forms a continuous cutting line on the paper. At the same time, the control system is responsible for coordinating the work of various components to achieve automated cutting, while the protective devices include laser protective covers, emergency stop buttons, etc. to ensure safe operation.

Market driving factors

Technological progress and equipment upgrades:

With the continuous development of laser technology, the cutting accuracy, speed and efficiency of laser paper cutters are constantly improving, meeting the market's demand for high-quality and high-efficiency cutting equipment.

The upgrading of equipment has also promoted the development of the market. Medium and high-power laser equipment has become a hot topic in the market, promoting the continuous maturity of laser technology and the breakthrough of cutting thickness limits.

Growing demand in downstream industries:

The growing demand for laser paper cutters in industries such as cartons, cardboard

packaging, shoemaking, cloth processing and mold manufacturing has promoted the rapid development of the market.
