Laser slide marking machine is a kind of equipment specially used for printing or marking on slides. In the medical field, it is often necessary to take out the living tissue from the patient and put it on the slide to make pathological specimens, which are chemically treated and then put under the microscope for pathological observation, diagnosis and research. In order to facilitate the hospital on the pathology specimen archiving automated identification and digital management, need to mark the patient's clinical information and pathological tissue on the slide sampling site information. Laser slide marking machine adopts advanced laser printing technology, which makes the marking resistant to various solvents and long-term preservation.
