A laser ultrasonic measurement system is an advanced, non-contact technology designed for precise inspection and measurement of materials using laser-generated ultrasonic waves. This system employs a laser to create ultrasonic waves in a material and a separate laser to detect the reflected or transmitted waves, analyzing the material's properties based on their interaction. It is widely used in industries like aerospace, automotive, and manufacturing for applications such as thickness measurement, defect detection, material characterization, and weld inspection. With its ability to operate on high-temperature, moving, or hard-to-access surfaces, the laser ultrasonic measurement system offers unparalleled accuracy, efficiency, and versatility for quality control and structural evaluation.
