## Abstracts

According to our (Global Info Research) latest study, the global LCD Room Thermostat market size was valued at US\$ 1075 million in 2025 and is forecast to a readjusted size of US\$ 1584 million by 2032 with a CAGR of 5.7% during review period.

Global production of LCD room thermostats reached 19.34 million units in 2025, with an average selling price of \$54 per unit. An LCD room thermostat is a controller used in room or zone air conditioning/terminal units (such as fan coil units (FCUs), VRF indoor units, split units, heat pump terminals, etc.). It features an LCD display to show the set temperature, room temperature, mode (cooling/heating/dehumidifying/air supply), fan speed, timer, alarms, etc., and outputs control signals to the air conditioning terminal/controller via a switch relay, 0–10V/PWM proportional output, or communication bus. Applications include residential communities, office buildings, hotels, factory workshops, warehouses, and small computer rooms. The upstream of the industry chain includes LCD modules (segment/dot matrix/color screens), backlights, touch layers, temperature sensors (NTC/digital thermometers), relays/SCRs/drivers, power modules (AC-DC/voltage regulators), antennas, and terminals; the midstream consists of manufacturers, with the production process including ODM/OEM design (hardware + firmware + UI) > SMT/assembly > calibration and burn-in > certification (different regions/building control protocols) > shipment; the downstream targets HVAC equipment manufacturers and building automation/room control system providers (hotels, offices), etc. Gross profit margin is approximately 15%–30%.
