A lead-lined X-ray door is a special type of door that incorporates lead plates as an internal lining within its structure. It primarily consists of a door frame, door leaf, lead lining plate, sealing devices, hardware fittings, and other components. Its core characteristic is the utilization of lead's high-density property to effectively block the penetration of X-rays. The thickness of the lead lining is typically designed and selected based on various X-ray energies and shielding requirements. Generally speaking, the thicker the lead lining, the stronger its protective capability against X-rays.
