According to our (Global Info Research) latest study, the global LED Carrier Tape market size was valued at US\$ 340 million in 2024 and is forecast to a readjusted size of USD 483 million by 2031 with a CAGR of 5.1% during review period.

LED carrier tape is one type of carrier tape, mainly used in the electronic component mounting industry. It is used in conjunction with a cover tape (upper sealing tape) to carry and store electronic components such as resistors, capacitors, transistors, diodes, etc. in the pocket of the carrier tape, and forms a closed packaging by sealing the cover tape above the carrier tape to protect electronic components from contamination and damage during transportation. When electronic components are mounted, the cover tape is peeled off. The automatic mounting equipment uses the precise positioning of the carrier tape index hole to sequentially remove the components stored in the pocket and mount them on the integrated circuit board.
