## Abstracts

According to our (Global Info Research) latest study, the global Leveling Agent O market size was valued at US\$ 398 million in 2025 and is forecast to a readjusted size of US\$ 493 million by 2032 with a CAGR of 3.1% during review period.

In 2025, the global production of leveling agent O is approximately 230,000 tons, with an average selling price of about US\$1680 per ton. The single-line production capacity is approximately 9800 tons per year, with an average gross profit margin of about 15-25%. Leveling agent O is a non-ionic surfactant, mainly synthesized from the condensation of fatty alcohols and ethylene oxide. It typically appears as a milky white paste or flakes and is widely used in the textile printing and dyeing industry as a leveling agent, dispersant, and stripping agent. It ensures even and vibrant dyeing, increases color fastness, and also possesses wetting and emulsifying properties.

The core upstream raw materials for leveling agent O are fatty alcohols and ethylene oxide, which are reacted through ethoxylation to produce fatty alcohol polyoxyethylene ether. Its downstream applications are primarily in the textile printing and dyeing industry as a basic leveling agent and dispersant, and extend to the daily chemical industry (as an emulsifier in creams and detergents), the pesticide industry (as an emulsifier in emulsifiable concentrate formulations), and other industrial fields such as leather, paper, and polymer polymerization.
