Limb protectors for the elderly are assistive protective devices designed to provide cushioning, impact resistance, and support for vulnerable body parts such as arms, elbows, knees, and hips during daily activities or accidental falls. These products typically use high-elasticity cushioning materials and ergonomic, wearable designs to reduce impact forces and lower the risk of fractures and soft tissue injuries. They are widely used in home-based elderly care, community care facilities, and rehabilitation settings.

Upstream suppliers mainly provide polymer foams, silicone, textile fabrics, elastic straps, and plastic components, with cushioning and comfort materials having a significant impact on product performance and cost. The midstream segment consists of product designers, manufacturers, and brand owners responsible for structural design, material selection, production, and quality control. Downstream customers include elderly individuals, nursing homes, rehabilitation centers, and healthcare channels, with sales primarily through e-commerce platforms, medical device distributors, and institutional procurement, driven by global population aging and increased investment in elderly care services.
