According to our (Global Info Research) latest study, the global Linear Alkylbenzene (LAB) market size was valued at US\$ 4590 million in 2024 and is forecast to a readjusted size of USD 5110 million by 2031 with a CAGR of 1.6% during review period.

LAB (Linear Alkyl Benzene) is the main compound in the production of detergents and cleaning products. It is produced through the alkylation of Benzene and Normal Paraffin, which can be extracted from Kerosene. Most of the LAB produced will be used in the production of LAS (Linear Alkylbenzene Sulfonate), which can then be used to make detergents and cleaning products. Eighty percent of LAS produced will be used to manufacture detergents for household use. The rest will be used to manufacture industrial and commercial cleaning products. LAS is one type of surfactant which can reduce water surface tension when dissolved in water. Surfactant works by producing bubbles, which can lift stains from various surfaces and disperse them in water.

On the basis of product type, HF Paraffins represent the largest share of the worldwide Linear Alkylbenzene (LAB) market, with 71% share. In the applications, Laundry Detergent segment is estimated to be the largest end-use industry segment of the market, with 69% share of global market. The top one companies is CEPSA, which is the leaders of the industry and took up about 16% of the global market.
