## Abstracts

According to our (Global Info Research) latest study, the global Lipase (LPS) Assay Kit market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Lipase, also known as glyceride hydrolase, is a type of enzyme with multiple catalytic abilities. It can catalyze the hydrolysis, alcoholysis, esterification, and transesterification of triglycerides and other water-insoluble esters, and promote the reverse conversion of esters. The synthesis reaction is an important part of the organism's process of promoting lipids to enter the metabolic cycle. Lipase in mammals mainly originates from the pancreas, followed by the stomach and small intestine, and can hydrolyze a variety of glycerides containing long-chain fatty acids with low specificity. Significant changes in its activity usually reflect damage to the pancreas and other related diseases.
