Lipo Laser Machines are non-invasive body shaping devices that use low-energy lasers to dissolve and eliminate fat cells. The basic principle of laser lipolysis is to irradiate fat tissue with laser of a specific wavelength. The laser energy is absorbed by fat cells and converted into heat energy, causing the fat cells to rupture and release the fatty acids and glycerol in them. These released substances are then metabolized by the body, thereby achieving the purpose of reducing fat deposition and shaping the body.
