Abstracts

According to our (Global Info Research) latest study, the global Liquid Air Entraining Agent market size was valued at US\$ 700 million in 2025 and is forecast to a readjusted size of US\$ 1128 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global production of liquid air entraining agents reached approximately 0.40 million tons, based on an average market price of around US\$ 1,700 per ton. Industry gross profit margins generally ranged from 25% to 40%, reflecting formulation technology, performance stability, and compliance with construction material standards. Global production capacity in 2025 was estimated at about 0.52 million tons, indicating adequate supply capability to support infrastructure and commercial construction demand.

Liquid air entraining agents are chemical admixtures added to concrete and mortar to introduce and stabilize microscopic air bubbles within the hardened matrix. These entrained air voids improve workability, enhance freeze–thaw resistance, and increase durability in harsh environmental conditions.

The industrial chain includes upstream surfactants, organic compounds, stabilizers, and solvents. The midstream focuses on formulation blending, quality control, packaging, and logistics. Downstream applications mainly involve ready-mix concrete, precast concrete, infrastructure construction, and commercial building projects.
