According to our (Global Info Research) latest study, the global Liquid Nitrogen Generators market size was valued at US\$ 27.6 million in 2024 and is forecast to a readjusted size of USD 35.3 million by 2031 with a CAGR of 3.6% during review period.

Liquid nitrogen is commonly used as a cryogenic refrigerant. Reasons why it is commonly used are that the nitrogen gas that it consists of accounts for 80% of air and so a large quantity of liquid nitrogen can be easily manufactured and obtained, nitrogen gas is inert, and it has a large thermal capacity which means it has a long retention time.

A liquid nitrogen generator consists of a nitrogen gas generator that separates and extracts nitrogen gas from the air and the main body that liquefies the nitrogen gas. The main body of the liquid nitrogen generator has a cryocooler for liquefying nitrogen gas, a vacuum heat-insulated vessel to store the liquid nitrogen, a level gauge, safety devices, and a control system in it.

The industry's leading producers are Peak Scientific, Ulvac Cryogenics and Noblegen, with revenue ratios of 33.34%, 23.97% and 14.08%, respectively, in 2019.
