Abstracts

According to our (Global Info Research) latest study, the global LiTaO₃ (LT) and LiNbO₃ (LN) Crystal market size was valued at US\$ 20.6 million in 2023 and is forecast to a readjusted size of USD 45.3 million by 2030 with a CAGR of 10.6% during review period.

LN crystals and LT crystals are both piezoelectric crystals. Both crystals have excellent photoelectric, piezoelectric, and thermoelectric properties and are important crystal materials in optics. They are mainly used to make radio frequency filters, infrared detectors, acousto-optic deflectors, acousto-optic modulators, electro-optic modulators, high-frequency broadband filters, high-frequency transducers, surface acoustic wave filters (SAW), bulk wave devices (BAW), etc.

Lithium tantalate and lithium niobate crystals are both nonlinear optical crystals. In addition, nonlinear optical crystals also include LBO, BBO, KTP, etc. The future development trend of lithium tantalate and lithium niobate crystal markets is mainly reflected in the following aspects:

1. Improve product quality through technological innovation to meet the needs of high-end terminal applications. Technological innovation is mainly reflected in processing technology, crystal growth technology, etc.
2. Develop new functional crystals for emerging application fields.
3. Large-scale and batch application. Batch application will promote the widespread application of optical crystals in more fields. For example, in the industrial (laser cutting, welding, marking, etc.) and civil (laser display, laser stage lighting, laser measuring instruments, etc.) markets, optical crystals are key components, and their performance stability and reliability are crucial to the overall performance of the equipment. Through mass production, production costs can be reduced and production efficiency can be

improved, thereby promoting technological progress and industrial upgrading in these fields.
