## Abstracts

According to our (Global Info Research) latest study, the global Lithium Battery for Scissor Lifts market size was valued at US\$ 67.70 million in 2025 and is forecast to a readjusted size of US\$ 117 million by 2032 with a CAGR of 8.4% during review period.

The lithium battery for scissor lifts is a power solution specifically engineered for aerial work platforms, offering high energy density, long cycle life, fast charging, and low maintenance. Compared with traditional lead-acid batteries, lithium systems significantly enhance runtime and operational efficiency while delivering stable voltage output for frequent start–stop usage and prolonged operation. With improved low-temperature performance and an integrated safety management system, lithium batteries provide greater reliability, environmental benefits, and reduced total lifecycle costs for scissor lift applications. In 2025, global lithium battery for scissor lifts sales reached approximately 435 MWh, and the price is depending on capacity of the battery.

The industrial chain of lithium batteries for scissor lifts can generally be divided into upstream materials, midstream battery manufacturing, and downstream equipment and applications. The upstream segment mainly includes lithium salts (lithium carbonate or lithium hydroxide), cathode materials (predominantly lithium iron phosphate), anode materials (graphite), separators, and electrolytes, with costs highly influenced by lithium prices and material formulations. The midstream consists of battery cell, module, and battery pack manufacturers, typically integrating BMS, battery enclosures, and safety protection designs, and providing customized solutions to meet scissor lift requirements for long cycle life, high safety, and fast charging. The downstream segment is dominated by scissor lift OEMs and rental companies, where batteries are usually procured as part of the complete machine, and demand is driven by rising electrification

rates, expansion of the rental market, and the ongoing replacement of lead-acid batteries.
