According to our (Global Info Research) latest study, the global Lithium Carbonate for Electric Vehicles market size was valued at US\$ 7717 million in 2024 and is forecast to a readjusted size of USD 21720 million by 2031 with a CAGR of 16.1% during review period.

Lithium carbonate is a chemical compound with the formula Li_2CO_3 , and it plays a crucial role in the production of lithium-ion batteries used in electric vehicles (EVs). Lithium-ion batteries are the primary power source for modern electric cars, and lithium carbonate is one of the key raw materials required for their manufacturing. This compound is derived from lithium-bearing ores and is an essential component in the cathode material of these batteries, enabling the efficient storage and release of electrical energy, thus making it an indispensable element in the EV industry. Global EV sales continued strong. A total of 10.5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
