Abstracts

According to our (Global Info Research) latest study, the global LNG Ultrasonic Flowmeter market size was valued at US\$ 77.6 million in 2024 and is forecast to a readjusted size of USD 121 million by 2031 with a CAGR of 5.6% during review period.

The LNG ultrasonic liquid flow meter is based on ultrasonic technology and uses the speed at which ultrasonic signals propagate in liquid to determine the flow rate of the liquid. Several manufacturers offer ultrasonic flow meters designed specifically for measuring LNG (Liquefied Natural Gas). These meters utilize ultrasound to determine flow rate with high accuracy, especially in custody transfer applications. Examples include the ALTOSONIC V LNG (5-channel meter) and the Rosemount 3818 (dual 4-channel meter). Other options, such as the Panametrics Sentinel LNG and CALDON LEFM 280CiLT-R, offer even higher accuracy than traditional methods. Clamp-on versions are also available, eliminating the need to intrude into the pipe. The choice depends on the specific application requirements and the level of accuracy required.
