According to our (Global Info Research) latest study, the global Louvers and Dampers market size was valued at US\$ 680 million in 2024 and is forecast to a readjusted size of USD 956 million by 2031 with a CAGR of 5.0% during review period.

Dampers and louvers are used to manage the free flow of air but with different purposes. They are mostly placed on walls and can work as either the supply or exhaust entry point for the ventilation system. A damper (otherwise known as a louver) is a multi-element flow control device generally used to throttle large flows of air at low pressure. Louvers are used on air intake or exhaust where protection from water infiltration is required. They have fixed blades that do not close so if the application requires air shutoff, a combination damper/louver is recommended.

Global key players of Louvers and Dampers include Johnson Controls (Ruskin), Greenheck, TROX, TAMCO (SPX), Fl?ktGroup, etc. The top five players hold a share about 34%. Asia Pacific is the largest market for Louvers and Dampers, which has a share about 41%, followed by Europe and North America, with share 31% and 25%, separately. In terms of product type, Steel is the largest segment, occupied for a share of 55%. In terms of Applications, Commercial Buildings is the largest field with a share about 37%.
