Low-Calcium Peritoneal Dialysis Solution (Lactate Buffered) is a type of dialysis solution specifically designed for peritoneal dialysis, characterized by its low calcium content and the use of lactate as a buffer. This solution is suitable for peritoneal dialysis patients who need to control their calcium levels, especially those with hypercalcemia or those sensitive to high-calcium dialysis solutions. Lactate serves as a buffer, helping to maintain the pH balance of the dialysis solution and converting into bicarbonate in the body, which aids in neutralizing acidic metabolic byproducts.
