Abstracts

According to our (Global Info Research) latest study, the global Low Carbon Marine Coating market size was valued at US\$ 2830 million in 2025 and is forecast to a readjusted size of US\$ 4067 million by 2032 with a CAGR of 5.4% during review period.

In 2025, the global production of low carbon marine coating is estimated at 550,000 tons, with an average selling price of US\$5,000 per ton, a gross profit margin of about 35%, and a single production line capacity of about 8,000 tons per year. Low-carbon marine coatings are functional protective coatings specifically designed for ships, capable of significantly reducing greenhouse gas emissions throughout their entire lifecycle (from raw materials, production, coating, use to maintenance). Their core value lies not only in the low carbon footprint of the coating itself, but also in the significant energy-saving and consumption-reducing benefits they bring to ship operations through their special functions. The upstream consists of suppliers of basic chemical raw materials (epoxy resins, solvents, etc.) and bio-based/specialty resins; the midstream consists of coating manufacturers who develop and produce low-carbon coatings; and the downstream direct customers are shipyards and shipping companies, used for new ship construction and old ship repair. The core demand is strongly driven by global maritime environmental regulations (such as IMO's CII and EU ETS). Shipowners and shipping companies, in order to achieve compliance, mitigate risks, and significantly reduce long-term fuel consumption, have created an urgent need for high-performance low-carbon coatings. These coatings directly improve ship energy efficiency by reducing hull drag, thereby lowering carbon emissions and fuel costs, making them an indispensable strategic investment. In addition, financing pressure from banks, lessors, and other financial institutions for green shipping, as well as end-customers' expectations for supply chain decarbonization, together constitute a secondary but

increasingly important driving force for demand.
