Low Endotoxin Matrigel is a matrix gel product that has undergone special treatment to reduce endotoxin content. Matrix gel is mainly composed of extracellular matrix components and can simulate the in vivo cell growth environment to promote cell adhesion, growth, and differentiation. Low endotoxin matrix gel not only ensures the safety and effectiveness of the cell culture process but also reduces the risk of cell toxicity and inflammatory responses caused by endotoxin contamination. It is widely used in research and experiments in cell biology, tissue engineering, and regenerative medicine.
