Low-power LED lamps and lamps refer to lighting equipment that uses low-power (usually less than 5 watts) light-emitting diodes (LEDs) as light sources. They are widely used in interior decoration, signage, landscape lighting and other fields. Compared with traditional lighting methods, low-power LED lamps have the advantages of low energy consumption, long life, small size, fast startup speed and rich colors. They usually use efficient driving circuits and heat dissipation designs to ensure stable light output during long-term use, and can realize a variety of intelligent control functions such as dimming and color change. Due to their energy-saving and environmentally friendly characteristics, low-power LED lamps and lamps have been widely used in homes, businesses and public facilities.

With the popularization of Internet of Things (IoT) technology, more and more low-power LED lamps are integrated with sensors and wireless communication modules, which can automatically adjust the brightness and color according to ambient light, human body sensing or remote instructions, providing a more personalized lighting experience. In addition, manufacturers continue to optimize materials and technologies to reduce production costs and improve product reliability and energy efficiency.
