According to our (Global Info Research) latest study, the global Low Power Mobile C-arm market size was valued at US\$ 785 million in 2024 and is forecast to a readjusted size of USD 1175 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The C-arm is composed of a C-arm frame, an integrated high-voltage generator, an X-ray tube, a collimator, an image intensifier, a digital imaging system, an LCD monitor, a monitor trolley, an X-ray manual switch and a foot switch, and a laser aimer (optional). Product application scope The product application scope includes urology, endoscopy, plastic surgery, angiography, cardiology, vascular and neurology, as well as intensive care and accident and emergency. It is suitable for daily diagnosis in clinical environments.

With the aging population and the increase in chronic diseases, the demand for medical services continues to grow. Mobile C-arm X-ray machines provide fast and convenient imaging diagnostic solutions in hospitals, emergency rooms, operating rooms and other medical institutions, meeting the growth of medical needs.

The technology of mobile C-arm X-ray machines continues to advance, including improved resolution, improved imaging quality and reduced radiation dose. These technological innovations make mobile C-arm X-ray machines safer, more accurate and easier to use, attracting the attention and adoption of medical institutions and

professionals.

Compared with traditional fixed X-ray equipment, mobile C-arm X-ray machines have a smaller size and weight and can be easily moved to different locations. This portability and flexibility make mobile C-arm X-ray machines widely used in environments such as emergency scenes, operating rooms and specific temporary clinics.

Mobile C-arm X-ray machines are generally cheaper than traditional fixed equipment and have lower costs in equipment maintenance and operation. This makes it easier for small and medium-sized medical institutions and regional medical centers to adopt this technology, improving the accessibility of imaging diagnosis.
