Low-speed kettle dryer is an intermittent drying equipment commonly used in chemical, pharmaceutical and food industries. Its main feature is that it uses a low-speed rotating stirring paddle or scraper to mix and dry the materials. The equipment heats the kettle body through a jacket or internal heating medium, and removes moisture or solvents from the materials under vacuum or normal pressure conditions. It has the advantages of uniform heating, low energy consumption and small material loss. Low-speed kettle dryer is particularly suitable for processing heat-sensitive, viscous, high-water content or materials that require high uniformity of drying.
