## Abstracts

According to our (Global Info Research) latest study, the global Low-voltage Shore Power Box market size was valued at US\$ 463 million in 2025 and is forecast to a readjusted size of US\$ 741 million by 2032 with a CAGR of 6.9% during review period.

Low-voltage shore power boxes are power distribution devices used to provide shore power to ships, managing low-voltage connections, line protection, monitoring, and load distribution. The system ensures reliable power supply, protects the ship's electrical systems, and supports energy-efficient operation in ports and docks. The low-voltage shore power box industry chain includes upstream circuit breakers, power relays, busbars, monitoring sensors, and enclosure materials; midstream assembly, testing, system integration, and quality control; and downstream applications covering commercial ports, yacht marinas, electric ships, and maintenance service providers, along with supporting installation, commissioning, inspection, maintenance, and compliance verification services. In 2025, global production of low-voltage shore power boxes was approximately 16,071 units, with a global average market price of approximately US\$28,000 per unit. The gross profit margin of major manufacturers in the industry ranged from 30% to 40%, primarily due to added value from safety features, electrical protection, and system integration. Global low-voltage shore power box production capacity was projected to reach approximately 20,000 units in 2025, sufficient to meet the growing demand from ports and electric ships.
