A Macromolecule Chromatography System is an advanced analytical tool used to separate, analyze, and purify large molecules, such as proteins, nucleic acids, and polymers, based on their size, charge, or affinity to specific ligands. This system employs different chromatographic techniques, including gel filtration (size-exclusion), ion-exchange, and affinity chromatography, to effectively handle macromolecules that are often complex and sensitive. It is widely used in biochemistry, molecular biology, and polymer science for applications such as protein purification, structural analysis, and quality control. The system allows precise separation, making it essential in both research and industrial settings, particularly in the pharmaceutical and biotechnology industries.
