Abstracts

According to our (Global Info Research) latest study, the global Magnet Assemblies market size was valued at US\$ 21891 million in 2025 and is forecast to a readjusted size of US\$ 32920 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global production of magnet assemblies reached 1,150,000 tons, with an average selling price of 18,500 USD per ton, total production capacity of 1,320,000 tons, and an average gross margin of 27%.

Magnet assemblies are functional magnetic units formed by integrating permanent magnetic materials (such as NdFeB, ferrite, or SmCo) with metal parts, plastic components, or other structural elements. They are widely used in motors, loudspeakers, sensors, and various electromechanical devices to provide stable and controllable magnetic fields. Compared with standalone magnets, magnet assemblies place greater emphasis on magnetic circuit design, structural integration, and application-oriented performance.

Upstream of the magnet assemblies industry mainly includes suppliers of permanent magnetic materials (NdFeB, ferrite, and SmCo magnets), metal structural parts, and auxiliary materials such as adhesives and coatings. The midstream consists of companies engaged in the design, machining, and assembly of magnet assemblies, focusing on magnetic circuit design, structural integration, and either mass or customized production. Downstream applications are primarily in motors, loudspeakers, automotive electronics, industrial automation, consumer electronics, new energy vehicles, and energy equipment, where high performance stability, batch consistency, and customization capability are essential.
