A marine compass is a navigational instrument used by sailors and mariners to determine the direction of travel at sea. It is a magnetic compass specifically designed to be used on a boat or ship. The marine compass consists of a magnetic needle that aligns itself with the Earth's magnetic field, indicating the north-south direction. It is typically housed in a liquid-filled capsule to reduce friction and provide stability. The compass is mounted on a gimbal system that allows it to remain level and unaffected by the motion of the vessel. Marine compasses are essential tools for navigation and are used in conjunction with charts, maps, and other navigational aids to determine the course and heading of a vessel.
