Abstracts

According to our (Global Info Research) latest study, the global Acidic Colloidal Silica market size was valued at USD 83 million in 2023 and is forecast to a readjusted size of USD 110.5 million by 2030 with a CAGR of 4.1% during review period.

Colloidal silica is silica particles that are suspended in a liquid. The liquid is denser than water and has been stabilized electrostatically to allow the particles to stay suspended in the solution. The silica particles are also very small and do not have a large density. If the particles are too large, they will settle out of the solution. If the silica particles are too small, they are difficult to stabilize in a solution. Colloidal silica is not only available in bulk deliveries, but also in plastic drums and IBCs.

The pure silica sols are anionic and are typically sodium- or ammonium-stabilized to a pH of 9-11. Through modification using sodium aluminate, however, the sols are stable down to a pH of 3-4. Cationic silica sols are stable at pH 4-5, and deionized sols are stable at a low pH, typically 2-3.

From the different types of acidic colloidal silica, the particle size 10-20 nm type held the maximum market share with over 63% in 2019.

From the perspective of applications, the catalysts took the first place with 42% market share in 2019, while textile industry occupied 22% of the market share.
