According to our (Global Info Research) latest study, the global Mechanical Seals for Flue Gas Desulphurization market size was valued at US\$ 210 million in 2025 and is forecast to a readjusted size of US\$ 282 million by 2032 with a CAGR of 4.4% during review period.

Mechanical Seals for Flue Gas Desulphurization (FGD) are installed at the shaft of pumps (especially circulation pumps) in the desulfurization system. They prevent corrosive media containing sulfur dioxide, lime slurry, and impurities from leaking to the outside, while also preventing air ingress and protecting the precision mechanical components inside the equipment. This ensures the pump's long-term, reliable operation in harsh, abrasive environments (such as lime slurry). The core technology lies in the ultra-hard friction pair materials. Other components include high-performance rubber O-rings (such as fluororubber FKM and perfluoroelastomer FFKM). Global sales are projected to reach approximately 1.82 million units in 2025, with an average market price of approximately US\$112 per unit. The industry's gross profit margin is in the range of 15%–30%.
