According to our (Global Info Research) latest study, the global Medical CT Slip Ring market size was valued at US\$ 116 million in 2024 and is forecast to a readjusted size of USD 150 million by 2031 with a CAGR of 3.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A slip ring, also known as a rotary electrical joint, rotating electrical connector, or collector, is a device that allows power and electronic signals to be transmitted from a stationary structure to a rotating one. Slip ring technology refers to the use of an electromechanical device called a “slip ring” to establish a continuous electrical connection between stationary and rotating components in a system. Computed Tomography (CT) has become an essential imaging tool in modern medicine, offering detailed cross-sectional images of the body’s internal structures. Slip ring technology plays a pivotal role in the functionality and performance of CT scanners.

Before slip rings were around, CT was making good images of body parts that weren’t moving. For example, brains in well positioned patients could have high image quality even on early CT scanners (i.e. before slip rings). In cases of moving organs however CT was challenged as only narrow collimation axial scanning was possible. Narrow collimation axial scanning had long volumetric acquisition times and therefore a higher likelihood for motion artifacts. Scan times before slip rings were longer than a reasonable breath hold and no gating scanning for cardiac or respiratory motion was clinically feasible. After the invention of CT itself and moving from first generation CT to

third generation CT the incorporation of slip rings into modern CT is the most import enabler of improved scanning. It has enabled a number of clinical applications which were hypothesized when the Nobel Prize was granted for CT, but not possible until slip-ring CT was a reality. The computed tomography (CT) industry is highly regulated. In the U.S., the Food and Drug Administration (FDA) regulates CT scanners and requires manufacturers to obtain clearance or approval before they can be marketed. In Europe, CT scanners are regulated by the European Medicines Agency (EMA) and are subject to the European Union's Medical Device Regulation (MDR). Similarly, the Pharmaceuticals and Medical Devices Agency (PMDA), Japan; National Medical Products Administration (NMPA), China; and Central Drugs Standard Control Organization (CDSCO), India are some of the regional regulatory authorities.
