In the medical field, a tissue pulverizer usually refers to a handheld electric or pneumatic device equipped with a high-speed rotating blade that can efficiently and safely cut and crush tissue. This device is designed to assist doctors in surgical operations, improve surgical efficiency and precision, and reduce surgical trauma and patient recovery time.

Tissue pulverizers can quickly cut tissue into small pieces or powder, greatly shortening the operation time. The equipment is usually equipped with safety protection devices, such as suction devices, to prevent the cut tissue fragments from scattering in the surgical area and reduce the risk of infection. Doctors can adjust the cutting speed and blade rotation direction according to surgical needs to achieve precise tissue cutting and crushing. Tissue pulverizers can not only be used for tissue cutting and crushing in gynecological surgery, but also in other medical fields that require tissue processing.
