Medical Imaging Chiller is a cooling device that provides necessary heat dissipation support for medical imaging equipment such as MRI, CT scanner, PET scanner, etc. by providing cooling water with constant temperature, constant flow and constant pressure. These devices generate a lot of heat during operation. If the heat cannot be dissipated in time, it may cause the equipment to overheat, affecting the stability and service life of the equipment. Therefore, medical imaging chillers play a vital role in the field of medical imaging.
