## Abstracts

According to our (Global Info Research) latest study, the global Medical Low Temperature Plasma Disinfection Cabinet market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Medical low-temperature plasma disinfection cabinet uses H<sub>2</sub>O<sub>2</sub> (hydrogen peroxide) as the sterilization medium. Its gaseous molecules are excited by specific electromagnetic waves under vacuum conditions to form low-temperature plasma. Many charged particles have high thermal kinetic energy (up to several thousand volts), which instantly and quickly break down, etch, and oxidize the proteins and nucleic acids in the microorganisms attached to the surface of the instrument, inactivating them and achieving the purpose of sterilizing the instrument. After sterilization, the H<sub>2</sub>O<sub>2</sub> plasma finally recombines into a small amount of water vapor, with no harmful substances remaining, no harm to medical staff, and no pollution to the environment. Medical plasma disinfection cabinet can perform low-temperature disinfection and drying of medical equipment and other items. It has strong disinfection function, fast and lossless, safe and environmentally friendly, longer life, and wide application. The equipment is mainly suitable for the sterilization of metal and non-metal instruments, especially for precision instruments that are afraid of heat and humidity, and can be widely used in operating rooms, supply rooms and other treatment rooms of medical equipment.
