Medical ozone therapy devices are specialized medical instruments designed to generate and administer ozone gas for therapeutic purposes. Ozone therapy involves the use of ozone, a highly reactive form of oxygen, to treat various health conditions by stimulating the immune system, improving oxygen delivery to tissues, and promoting detoxification and healing. These devices can deliver ozone in different ways, such as through ozonated water, oils, insufflation, or direct injection. Medical ozone therapy is used in a range of treatments, including wound care, infection control, and chronic disease management, and is valued for its potential anti-inflammatory, antibacterial, and antiviral properties. The devices are regulated to ensure safe and precise ozone concentration and administration, adhering to medical standards and protocols.
