According to our (Global Info Research) latest study, the global Medium and Low Density Calcium Silicate Boards market size was valued at US\$ 2468 million in 2024 and is forecast to a readjusted size of USD 5221 million by 2031 with a CAGR of 11.4% during review period.

Calcium silicate boards as a new green building material, in addition to a conventional functions like gypsum board, also has excellent advantages of fire performance, moisture resistance, and long service life. Calcium silicate boards are widely used in commercial, industrial and residential construction of the suspended ceiling and partition wall, home decoration, furniture liners, billboards lining, the ship's compartment plate, warehouse boards, and other indoor engineering siding.

Medium and low density calcium silicate board is a multifunctional building material made of calcium silicate, quartz sand, cellulose fiber and other inorganic materials. Its density in the calcium silicate board series is between high-density calcium silicate board and ordinary calcium silicate board. The material is lightweight, heat-insulating, fire-proof, sound-proof and corrosion-resistant, making it widely used in construction and industry. Compared with high-density calcium silicate boards, medium and low-density calcium silicate boards are lighter and suitable for places that need to reduce the weight of buildings, such as roofs and ceilings. Medium and low density calcium silicate board has good thermal insulation performance due to its low thermal conductivity, which helps to keep the indoor temperature stable and save energy.
