Mesalamine also known as mesalamine, or 5-aminosalicylic acid (5-ASA), is a medication used to treat inflammatory bowel disease, including ulcerative colitis and Crohn's disease. It is generally used for mildly to moderately severe disease. It is taken by mouth or rectally. The formulations which are taken by mouth appear to be similarly effective.

The global prevalence of IBD is rising, particularly in developed regions like North America and Europe, and increasingly in developing nations such as China and India.
