According to our (Global Info Research) latest study, the global Metal Card Edge Connectors market size was valued at US\$ 985 million in 2024 and is forecast to a readjusted size of USD 1517 million by 2031 with a CAGR of 6.3% during review period.

Metal card edge connectors are a type of board-to-board electronic connectors, in which both the plug and the socket are made of metal materials. When the edge of the printed circuit board (PCB), usually equipped with gold fingers, is inserted into the connector, the metal contacts inside the connector will make reliable electrical connections with the conductive traces on the PCB edge. This enables the transmission of electricity and signals between the PCB and other connected systems. They have the advantages of high electrical conductivity, excellent mechanical strength, good durability and reliability, and are suitable for applications requiring high current and high voltage, such as computer motherboards, servers, industrial control equipment and communication devices.
