Abstracts

According to our (Global Info Research) latest study, the global Metal Wafer Ring Frame market size was valued at US\$ 85 million in 2024 and is forecast to a readjusted size of USD 127 million by 2031 with a CAGR of 6.0% during review period.

A wafer ring frame, also known simply as a ring frame or a wafer ring, is a circular or annular support structure used in the semiconductor manufacturing process. It plays a crucial role in holding and protecting semiconductor wafers during various stages of fabrication, handling, transportation, and storage within the semiconductor industry.

The primary purpose of a wafer ring frame is to securely hold semiconductor wafers while minimizing the risk of contamination, damage, or deformation. These frames are made from materials that are compatible with cleanroom environments and are designed to ensure the integrity of the wafers they hold. Wafer ring frames typically consist of a circular ring with features that allow wafers to be easily loaded and unloaded.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0%

year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
